DETAILED ACTION

Allowable Subject Matter

1. Claims 2, 4, 5, 22 and 23 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 3 rejected under 35 U.S.C. 102(b) as being anticipated by Mihnea et al. (6,384,447).

Regarding Claims 1 and 3, Mihnea et al. disclose a source/drain regions 112 and 115 including a lightly doped region 133 and heavily doped region 136 adjacent to each other, an oppositely doped well region 128 under and within the channel region 162, , doped region 139 located between the heavily doped region 136 and oppositely doped well region 128 having a doping concentration profile less than a doping concentration profile of the heavily doped region.

Regarding Claim 3, substrate 106 has epitaxial layers.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2826

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 6,7, 15-21, 24 and 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Mihnea et al. (6,384,447) in view of Cai et al. (2004/0227190).

Regarding Claims 6,7, 15-21, 24 and 25, Mihnea et al. disclose a source/drain regions 112 and 115 including a lightly doped region 133 and heavily doped region 136 adjacent to each other, an oppositely doped well region 128 under and within the channel region 162, , doped region 139 located between the heavily doped region 136 and oppositely doped well region 128 having a doping concentration profile less than a doping concentration profile of the heavily doped region. Mihnea et al. Fail to disclose the required LDMOS and sidewall/spacers. However, Cai et al. disclose an ESD protection for semiconductor products where in Fig. 1, LDMOS structure has sidewall spacers 44.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required LDMOS and sidewall spacers in Mihnea et al. as taught by Cai. et al. in order to have semiconductor device with increased performance and reliability.
